

A strange group of suspects and some complicated coordinates

A strange group of suspects...

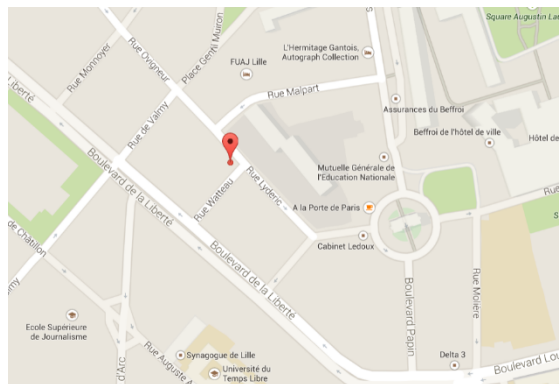

When we discovered Marie José's list of 14 suspects, we noted that two suspects had the same surname: Lionel E.A Sargant and Kate Sargant... We thought that these two people were married or maybe brother and sister but we couldn't check these hypotheses due to the fact these people existed before the epoch of the internet... This mystery remains to elucidate.

...and some complicated coordinates

In Marie José's folder were found some complex fractions: $\frac{18226873}{360000}^{\circ}\text{N}$ and $\frac{110386}{36000}^{\circ}\text{E}$

It was so difficult to understand what it meant !!! So, with some documents and the help of our professor, we noted that $^{\circ}\text{N}$ and $^{\circ}\text{E}$ were the same symbols for coordinates, like the coordinates of the Eiffel Tower: $48^{\circ}51'31''$.

With this information, we have concluded that these fractions were coordinates in degrees, which must be decomposed in arcminut, arsecond, and degrees. After a lot of research, we found these coordinates: These coordinates gave us the address of a little church, in the rue Lyderic in Lille ; near to the Palais des Beaux Arts...

This is historical fiction from the high school Notre Dame de la Paix, Place du Concert, Lille.
